### General Information

Only the pathologist may determine the medical necessity of a special stain. The vast majority of conditions of the stomach on biopsy can be diagnosed by the use of the routine hematoxylin and eosin (H&E) stain alone. There is potential for either over-utilization or under-utilization of these ancillary special stains. In most cases it is NOT reasonable or necessary to perform “special stains” such as alcian blue (AB) - periodic acid schiff (PAS) to determine if clinically meaningful intestinal metaplasia is present. In addition it is not usually reasonable or necessary to perform special stains or immunostains (IHC) to determine the presence of H. pylori.

Ordering special stains or immunostains prior to review of the H&E stain is not reasonable and necessary. If stains in addition to the H&E stain are needed, specific documentation to justify the need for the special stain is required in the pathology report. Although uncommon, cases that may require “special stains” or an IHC include but are not limited to the following:

- Detection of H. pylori in an appropriate milieu when organisms are not seen on H&E stained slides (Batts K, et al reference)
- Evaluating an atrophic gastritis for evidence of autoimmune etiology
- Characterizing a carcinoma, lymphoma, or sarcoma
- Defining a GIST tumor
less than 20% of biopsies received and examined in a practice, laboratory, or hospital. The MolDX Contractor agrees with the published data. To check utilization, Noridian encourages providers to perform a self-audit on the number of separate gastric biopsies (reported with CPT code 88305) as compared to ancillary stains (reported with CPT codes 88312, 88313, and 88342). The ancillary stain code group should be less than 20% of the total gastric biopsies (88305 codes) submitted. Providers that exceed the 20% criteria may be subject to additional action.

Bill Type Codes:

Contractors may specify Bill Types to help providers identify those Bill Types typically used to report this service. Absence of a Bill Type does not guarantee that the article does not apply to that Bill Type. Complete absence of all Bill Types indicates that coverage is not influenced by Bill Type and the article should be assumed to apply equally to all claims.
