Coverage Guidance

Coverage Indications, Limitations, and/or Medical Necessity

This policy addresses the injection of chemical substances, such as local anesthetics, steroids, sclerosing agents and/or neurolytic agents into ganglion cysts, tendon sheaths, tendon origins/insertions, ligaments or near nerves of the feet (e.g., Morton's neuroma) to affect therapy for a pathological condition.

Note: the term "**Morton's neuroma**" is used in this policy generically to refer to a swollen inflamed nerve in the ball of the foot, including the more specific conditions of Morton's neuroma (lesion within the third intermetatarsal space), Heuter's neuroma (first intermetatarsal space), Hauser's neuroma (second intermetatarsal space) and Iselin's neuroma (fourth intermetatarsal space). This policy applies to each.

Injection of a carpal tunnel or tarsal tunnel is indicated for the patient with a mild case of these syndromes, with or without a trial of other conservative measures, such as oral non-steroidal anti-inflammatory drugs (NSAIDs) or orthoses.

Injection therapies for Morton's neuroma do not involve the structures described by CPT code 20550 and 20551 or direct injection into other peripheral nerves but rather the focal injection of tissue surrounding a specific focus of inflammation on the foot. These therapies are not to be coded using 20550, 20551, 64450, 64640 or other assigned CPT codes. Rather, the provider of these therapies must bill with CPT code 64455 or 64632 Injection(s), anesthetic agent and/or steroid, plantar common digital nerve(s) (eg, Morton's neuroma) as the correct CPT code for the service.

Injections for plantar fasciitis are addressed by 20550 and ICD-10-CM M72.2. Injections for other tendon origin/insertions by 20551. Injections to include both the plantar fascia and the area around a calcaneal spur are to be reported using a single 20551.

Injection into tendon sheaths, ligaments, tendon origins or insertions, ganglion cysts, neuromas or other areas described by this policy may be indicated to relieve pain or dysfunction resulting from inflammation or other pathological changes. Proper use of this modality with local anesthetics and/or steroids should be short-term, as part of an overall management plan including diagnostic evaluation, in order to clearly identify and properly treat the primary cause. In some circumstances after diagnosis has been confirmed, injection of a sclerosing or neurolytic agent may be appropriate for longer-term management.

The signs or symptoms that justify these treatments should be resolved or reevaluated after one to three injections (see reference 2 below, under "Sources of Information and Basis for Decision"). **Injections beyond three to the same tendon origin/insertion, tendon sheath, ganglion, neuroma, ligament or local area in a six month period** must be justified by the clinical record indicating a logical reason for failure of the prior therapy and why further treatment can reasonably be expected to succeed. A recurrence may justify a second course of therapy.

Medical necessity for injections of more than two sites at one session or for frequent or repeated injections is questionable. Such injections are likely to result in a request for medical records which must evidence careful justification of necessity.

"Dry needling" of ganglion cysts, ligaments, neuromas, tendon sheaths and their origins/insertions are non-covered procedures.

Compliance with the provisions in this policy is subject to monitoring by post payment data analysis and subsequent medical review.

Coding Information

Bill Type Codes:

Contractors may specify Bill Types to help providers identify those Bill Types typically used to report this service. Absence of a Bill Type does not guarantee that the policy does not apply to that Bill Type. Complete absence of all Bill Types indicates that coverage is not influenced by Bill Type and the policy should be assumed to apply equally to all claims.

999x Not Applicable

Revenue Codes:

Contractors may specify Revenue Codes to help providers identify those Revenue Codes typically used to report this service. In most instances Revenue Codes are purely advisory. Unless specified in the policy, services reported under other Revenue Codes are equally subject to this coverage determination. Complete absence of all Revenue Codes indicates that coverage is not influenced by Revenue Code and the policy should be assumed to apply equally to all Revenue Codes.

Group 1 Medical Necessity ICD-10 Codes Asterisk Explanation: Group 1: Asterisk

*Use G57.51, G57.52 or G57.53 for Tarsal Tunnel Syndrome with CPT 28899 (Unlisted procedure, foot or toes).

*Use G57.61, G57.62 or G57.63 for Morton's metatarsalgia, neuralgia, or neuroma. NOTE: ONLY CPT 64455 or 64632 may be used with these diagnosis codes.

*Use M72.0 for CPT codes 20527 and 26341.

ICD-10 Codes that DO NOT Support Medical Necessity

Group 1 Paragraph: All ICD-10-CM codes not listed in this policy under ICD-10-CM Codes that Support Medical Necessity above.

Group 1 Codes: N/A

General Information

Associated Information

The clinical record should include the elements leading to the diagnosis and treatment decision to use injection. If the number of injections exceeds three to the same site or local area in a six month period, the record must justify these added injections since the presumed need for further injections should raise the issues of correct diagnosis or correct choice of therapy as well as concerns for adverse side effects. Records must be made available upon request.

The HCPCS/CPT code(s) may be subject to Correct Coding Initiative (CCI) edits. This policy does not take precedence over CCI edits. Please refer to the CCI for correct coding guidelines and specific applicable code combinations prior to billing Medicare.

When the documentation does not meet the criteria for the service rendered or the documentation does not establish the medical necessity for the services, such services will be denied as not reasonable and necessary under Section 1862(a)(1) of the Social Security Act.

The Section titled "Does the 'CPT 30% Rule' apply" needs clarification. This rule comes from the AMA (American Medical Association), the organization that holds the copyrights for all CPT codes. The rule states that if, in a given section (e.g., surgery) or subsection (e.g., surgery, integumentary) of the CPT Manual, more than 30% of the codes are listed in the LCD, then the short descriptors must be used rather than the long descriptors found in the CPT Manual.

This policy is subject to the reasonable and necessary guidelines and the limitation of liability provision.

This medical policy consolidates and replaces all previous policies and publications on this subject by Noridian and its predecessors for Medicare A/B.
