CMS National Coverage Policy

Title XVIII of the Social Security Act, Section 1862(a)(7) excludes routine physical examinations. This provision excludes screening examinations.

Title XVIII of the Social Security Act, Section 1862(a)(1)(A) allows coverage and payment for only those services that are considered reasonable and necessary.

Title XVIII of the Social Security Act, Section 1833(e) prohibits Medicare payment for any claim, which lacks the necessary information to process the claim.

Title XVIII of the Social Security Act, Section 1862(a)(1)(D) prohibits Medicare payment for services and items that are experimental or investigational.

Denies coverage of MRI for:

1. Imaging of cortical bone and calcification;
2. Procedures involving spatial resolution of bone or calcification;
3. MRI is not covered for patients with metallic clips on vascular aneurysms

discretionary coverage related to this service.

This policy addresses standard CT and MR imaging. *Magnetic Resonance Angiography (MRA) is not addressed in this policy.*

Computerized Tomography (CT)

Computerized tomography (CT scanning) uses the attenuation of an x-ray beam by an object in its path to create cross-sectional images. As x-rays pass through planes of the body, the photons are detected and recorded as they exit from different angles. Computers process the signals to produce a cross-sectional view of the body. The signal data may be subjected to a variety of post-acquisitional processing algorithms to obtain a multiplanar view of the anatomy.

Computerized Tomography (CT)

Computerized tomography (CT scanning) uses the attenuation of an x-ray beam by an object in its path to create cross-sectional images. As x-rays pass through planes of the body, the photons are detected and recorded as they exit from different angles. Computers process the signals to produce a cross-sectional view of the body. The signal data may be subjected to a variety of post-acquisitional processing algorithms to obtain a multiplanar view of the anatomy.

The use of the CT scan must be found medically appropriate considering the patient's symptoms and preliminary diagnosis.

- A. A CT scan is considered reasonable and necessary for the patient when the diagnostic exam is medically appropriate given the patient's symptoms and preliminary (or provisional) diagnosis.
- B. CT scans (as opposed to MRI evaluations) are used effectively in the following situations or conditions:
 1. Patients who are not suitable candidates for MRI evaluation:
 - a. Because of a pacemaker or intracranial metallic objects
 - b. Because of extreme obesity
 - c. Because of an inability to lie still
 2. Patients whose condition requires the visualization of fine bone detail or calcification
 3. Patients with the following conditions
 - a. Acute CNS Hemorrhage
 - b. Strokes or encephalomalacia
 - c. New onset seizures, particularly if a focal component is present (contrast agent is appropriate for these patients)
 - d. Intracranial (sic) lesions large enough to cause increased intracranial pressure (CT scan is useful to determine gross margins between tumor and edematous brain)
- C. There is no general rule that requires other diagnostic tests to be tried before CT scanning is used. However, in individual cases it may be determined that use of a CT scan as the initial diagnostic test was not reasonable and necessary because it was not supported by the patient's symptoms or complaints as stated on the claim.
- D. CT imaging has not been useful in general for the evaluation of headache or dizziness and should be reserved for the patient whose presentation indicates a focal problem or who has experienced a significant change in symptomatology.
- E. A CT scan for the diagnosis of headache (ICD-10 code G44.1) can be allowed for the following:
 1. After a head injury to rule out intracranial bleeding
 2. Headache unusual in duration (greater than two weeks) not responding to medical therapy, to rule out the possibility of a tumor
 3. A headache characterized by sudden onset and severity to rule out the possibility of an aneurysm, bleeding and/or arteriovenous malformation
- F. A CT Scan may be ordered without contrast, with contrast, or without contrast followed by contrast. Contrast administration is not without risk to the patient, and for some conditions, adds little or no benefit to the patient. The general indications for use of contrast CT scanning (as opposed to non-contrast scanning) are to:
 1. Assess perfusion (e.g. CVA)
 2. Characterize a specific lesion
 3. Detect defects in blood/brain barrier (e.g. infarct, tumor, infection, vasculitis)
 4. Detect neovascularity (tumor), and
 5. For staging of known lung cancer, breast cancer, and lymphomas likely to metastasize early to the brain
- G. Intravenous contrast generally adds no information to CT scans done secondary to head trauma. Additional symptoms suggesting a possible intracranial bleed may justify the use of contrast. These symptoms should be documented in the medical record, and if appropriate, included in the diagnostic codes listed on the claim.

- H. More than one contrast CT scan per episode of illness adds no information with the following exceptions:
1. CVA
 2. Non-traumatic hemorrhage
 3. TIA
 4. Post-operative scan for residual tumor or post operative complication
 5. Known brain tumor/metastases with a change in mental status or other evidence of CNS change

Magnetic Resonance Imaging (MRI)

Magnetic Resonance Imaging (MRI) is a non-invasive diagnostic scanning technique that employs a powerful and highly uniform static magnetic field, rather than ionizing radiation, to produce images. Fluctuations in the strength of the magnetic field alter the motion and relaxation times of hydrogen molecules, which are related to the density of molecules and reflect the physicochemical properties of the tissues. Reconstructed images can be displayed in multiple planes to facilitate analysis. **See national non-coverage in CMS section above.**

Coverage is limited to those CT and MRI machines that have received pre-market approval by the FDA. Such units must be operated within the parameters specified by the approval.

Inconclusive findings on a CT scan may warrant a MRI study and, conversely, findings of a MRI study may be further clarified (under certain circumstances) with a subsequent CT scan. The information provided by the two modalities may be complementary.

Cancer Staging. Clinicians commonly use CT and MRI of the brain when metastatic involvement is suspected.

Non-covered indications: esophagus, oropharynx, and prostate, and non-melanoma skin cancer in the absence of symptoms of brain involvement. "Certain tumors almost never metastasize to the brain parenchyma. These include carcinomas of the esophagus, oropharynx, and prostate, and non-melanoma skin cancers." (DeVita, Chapter 52.1) Accordingly, the related diagnoses found in the following diagnosis code list do not justify brain scans for "staging" purposes unless a patient has signs or symptoms suggesting brain involvement. Covered: In contrast, for those malignancies that commonly metastasize to the brain, staging in the absence of neurological findings may be appropriate.

Payment will be allowed for reasonable and necessary scans of different areas of the body that are performed on the same day and are not subject to this policy.

Bill Type Codes:

Contractors may specify Bill Types to help providers identify those Bill Types typically used to report this service. Absence of a Bill Type does not guarantee that the policy does not apply to that Bill Type. Complete absence of all Bill Types indicates that coverage is not influenced by Bill Type and the policy should be assumed to apply equally to all claims.

Revenue Codes:

Contractors may specify Revenue Codes to help providers identify those Revenue Codes typically used to report this service. In most instances Revenue Codes are purely advisory. Unless specified in the policy, services reported under other Revenue Codes are equally subject to this coverage determination. Complete absence of all Revenue Codes indicates that coverage is not influenced by Revenue Code and the policy should be assumed to apply equally to all Revenue Codes.

Providers must have documentation available for review to support these services are reasonable and necessary and not routine dental services.

*The asterisked ICD-10-CM codes that are **NOT** any of the asterisked codes listed directly above should only be coded when they involve conditions of the head or neck/spine (C1-C7).

General Information

Associated Information

Diagnostic evaluation of the head and neck (head/neck scans) performed by computerized tomography (CT) scanners is covered when the documentation supports that the scan is reasonable and necessary. Accurate coding information must be provided with claims to differentiate CT and/or MRI scans from other radiology services and to make coverage determinations.

Sufficient documentation such as, history and physical notes, laboratory results, signs and symptoms of the disease to warrant the diagnostic test and to support the claim of reasonable and necessary must be included in the medical records. This information must be available to Medicare upon request.

The HCPCS/CPT code(s) may be subject to Correct Coding Initiative (CCI) edits in addition to guidance in this LCD. Please refer to the CCI for correct coding guidelines and specific applicable code combinations prior to billing Medicare. Whichever guidance is more restrictive should be adhered to.
